## Additional Modifications (SVR-200 / SVR-250):

\*\* On older SVR-200 units without J11, install J1 & J2 instead.

## Additional Modifications (Radio):

1. Under **External IO Options**, Program **External Mute**, active high output 1.
2. Program **Aux Input 1** for **PTT**.
3. Program **Aux Output 1**: Custom, Active low, Output 2, Repeat checked. Custom pattern all checked. \*
4. Under **Control Unit Keypad Options**, program one of the soft keys for **AUX 1** to enable/disable the repeater from the radio front panel. \*

\* If using the factory interface cable, on air detect is connected to pin 29 with an internal pull up to regulated 5 volts. Additionally, there is a loop back for remote enable that can cut if you wish to enable the SVR from an external switch rather than a M7300 control head button. To use an external source, cut the **Blue** remote enable loop located at the DB-44 of the factory cable and connect the **White Marked Blue** lead to your remote enable switch.
